Beam Communications Signs 2 Year, \$500K Contract To Supply Satellite Tracking Hardware & Services to Support Emergency Vehicle Tracking & Alerts

World Reach Limited announced today that its wholly owned subsidiary, Beam Communications Pty Ltd, has signed a further important supply contract with Telstra Corporation Limited with an estimated minimum value of \$500K.

Under the agreement Beam will supply 150 of its locally designed and manufactured IridiTRAK satellite based GPS alert and tracking terminals and 300 services to support this initial order plus some existing units already in the field.

The Beam IridiTRAK terminal uses the Iridium Short Burst Data network to transmit and receive small packets of data to and from vehicles including GPS and other important information.

Telstra's client had evaluated a number of other products prior to making the decision to purchase the IridiTRAK solution from Telstra and the client was impressed with the capability of the Beam solution along with advantages of dealing with a local supplier.

This latest agreement with Telstra further reinforces Beam's continued involvement with Telstra and its Managed Services group in bringing together turnkey solution for Telstra.

Deliveries of the 150 units will commence in September with all units being shipped by the end of October 2009 with the provision of monthly short burst data services to commence shortly thereafter.

Beam is confident this mass deployment will provide a substantial reference customer for further expanding the application of these products locally and internationally through our channel partners.

Yours faithfully

A handwritten signature in black ink, appearing to read "Michael Capocchi".
